

Galaxy Slime

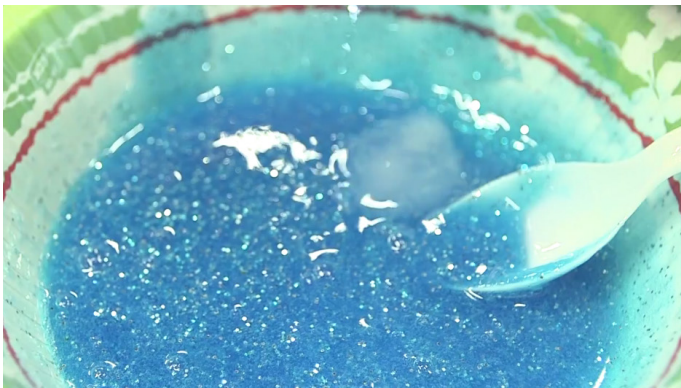

1. Add the clear glue.

Add equal amounts of clear glue to each bowl.

2. Make it colorful.

Add the food coloring or water color paints to the glue. » Next add the glitter. » Stir the glue until everything is evenly blended.

3. Add the starch.

Add a very small amount of starch to your slime, less than a capful. » Completely stir the starch in before adding any more. If you add too much starch or all of the starch at once, it will become lumpy! » Keep adding the starch and completely stirring it into the slime until it reaches the consistency that you like.

4. Blend your slime!

Mix everything together to complete your galaxy slime! » Have fun squishing it and stretching it! Try bouncing it too!

Supplies

Clear glue

Liquid starch

Water color paints or food coloring

Glitter

Mixing bowls

Spoons or other stirrers
